

# VENTIC<sup>ACI-RC</sup> **new**

## The Comfort-Window Control

- ▶ comfortable
- ▶ safe and reliable
- ▶ universal control
- ▶ simple to install

## More comfort

**VENTIC**<sup>ACI-RC</sup> opens remote windows in buildings and conservatories, by radio remote-control. Windows can be simply opened from anywhere, providing comfortable ventilation. An optional thermostat control can be connected directly for automatic control.

## Safe and reliable

The **VENTIC**<sup>ACI-RC</sup> transmitting frequency is immune to interference by the changing transmitting code of the remote control, preventing any unintentional opening of windows. An optional rain detector will automatically close windows preventing water damage.

## Universal control

Every drive can be controlled by up to 5 different remote controls. One remote control can control up to 12 drives, allowing control to be adapted to individual needs.

## Simple to install

Wiring costs are minimised thanks to the cableless control. The VENTIC uses "Single-Button-Programming" for the transmitter. Rain detectors or room temperature controls can be connected directly.

Through this, **VENTIC**<sup>ACI-RC</sup> can be installed quickly, easy and economically.

Window drive ACI-RC

Radio remote control

RCR 10-2  
(2 control buttons)

RCR 10-4  
(4 control buttons)

RCR 10-12  
(12 control buttons)

Room temperature control  
RTR 230

Rain detector  
VRS 10

## Technical Data

- ▶ Pressure force: 200 N
- ▶ Stroke length: max. 350 mm
- ▶ Supply voltage: 80-253 VAC
- ▶ Radio frequency: 868 MHz (approved in the whole of the EU except for Bulgaria)
- ▶ 24 Bit address codification
- ▶ transmitting code change with every key depression
